

JORDAN KIMATHI

Full-Stack Software Engineer | Cloud Architect | Open Source Contributor

Nairobi, Kenya | +254 712 345 678 | jordan.kimathi@email.com | linkedin.com/in/jordankimathi | github.com/jkimathi | jordankimathi.dev

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 7+ years of experience designing, developing, and deploying high-performance web applications and distributed systems. Expertise spans frontend frameworks (React, Next.js, Vue.js), backend services (Node.js, Python, Go), cloud infrastructure (AWS, GCP, Azure), and database architecture (PostgreSQL, MongoDB, Redis). Passionate about clean code, developer experience, and building products that scale. Active open-source contributor with 2,000+ GitHub stars across personal projects.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go, Rust, Java, C#, SQL, GraphQL, HTML5, CSS3, Bash, Solidity

Frontend: React.js, Next.js 14 (App Router), Vue.js 3, Nuxt.js, Svelte/SvelteKit, Angular, Tailwind CSS, Chakra UI, Shadcn/ui, Framer Motion, Three.js, D3.js, Storybook, Playwright, Cypress, Jest, React Testing Library, Webpack, Vite, Turborepo

Backend: Node.js, Express.js, Fastify, NestJS, Django, FastAPI, Flask, Spring Boot, Gin (Go), gRPC, REST APIs, GraphQL (Apollo Server), WebSockets, Server-Sent Events, Microservices Architecture, Event-Driven Architecture

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB, Supabase, Firebase/Firestore, Prisma ORM, Drizzle ORM, TypeORM, Knex.js, Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (EC2, ECS, Lambda, S3, RDS, CloudFront, SQS, SNS, API Gateway), GCP (Cloud Run, BigQuery, Pub/Sub), Azure (App Service, Functions), Docker, Kubernetes, Helm, Terraform, Pulumi, GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD, Datadog, Grafana, Prometheus, New Relic

AI/ML & Data: OpenAI API, LangChain, Hugging Face Transformers, TensorFlow.js, Python ML (scikit-learn, pandas, NumPy), Vector Databases (Pinecone, Weaviate), RAG pipelines, Prompt Engineering

Tools & Methodologies: Git, Agile/Scrum, TDD/BDD, Domain-Driven Design, SOLID Principles, Design Patterns, System Design, API Design (OpenAPI/Swagger), Figma, Linear, Jira, Notion

SOFT SKILLS

- Leadership: Technical team lead for 10+ engineers, mentoring junior developers, conducting architecture reviews
- Communication: Technical writing, stakeholder presentations, cross-functional collaboration with product and design teams
- Problem Solving: Strong analytical thinking, debugging complex distributed systems, performance optimization
- Adaptability: Quick learner of new technologies, thrives in fast-paced startup environments

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer — Safaricom PLC

2022 – Present

Nairobi, Kenya | Fintech & Telecommunications

- Architected and led development of a microservices-based payment platform processing 5M+ daily transactions using Node.js, Go, and Kubernetes on AWS.
- Designed and implemented a real-time analytics dashboard with Next.js 14, React Server Components, and WebSocket connections serving 200+ internal users.
- Built an event-driven notification system using Apache Kafka and AWS SNS, reducing message delivery latency by 60%.
- Introduced infrastructure-as-code using Terraform, reducing environment provisioning time from 2 days to 15 minutes.
- Mentored a team of 8 engineers through code reviews, pair programming, and weekly tech talks.
- Reduced API response times by 45% through database query optimization, Redis caching layers, and connection pooling.
- Implemented comprehensive CI/CD pipelines with GitHub Actions, achieving 98% test coverage and zero-downtime deployments.

Full-Stack Developer — Andela

2020 – 2022

Remote | Developer Talent Platform

- Developed and maintained the core talent-matching platform serving 100,000+ developers using React, TypeScript, and Django REST Framework.
- Built a real-time collaborative code assessment tool with WebSockets, Monaco Editor, and Docker-based sandboxed execution environments.
- Implemented a GraphQL API layer (Apollo Server) that unified 12 legacy REST microservices, reducing frontend data fetching complexity by 70%.
- Created an automated skill-verification pipeline integrating GitHub API, LeetCode, and custom coding challenges.
- Optimized PostgreSQL queries and implemented database sharding, handling 10x traffic growth without infrastructure cost increase.
- Led migration from class-based React to hooks and functional components across 200+ components.

Software Engineer — Twiga Foods

2019 – 2020

Nairobi, Kenya | AgriTech & Supply Chain

- Built a supply chain management system with Vue.js frontend and FastAPI backend, tracking 50,000+ daily product movements.
- Developed a route optimization algorithm using Python and Google OR-Tools, reducing delivery costs by 25%.
- Implemented geolocation-based features with Mapbox GL and PostGIS for real-time fleet tracking.
- Created automated inventory forecasting using scikit-learn models integrated into the production pipeline.
- Designed RESTful APIs following OpenAPI 3.0 specification, serving mobile (React Native) and web clients.

Junior Developer — IBM Research Africa

2017 – 2019

Nairobi, Kenya | Research & Innovation Lab

- Contributed to an AI-powered agricultural advisory platform using Python, TensorFlow, and React.
- Built data visualization dashboards with D3.js and Plotly for presenting research findings to stakeholders.
- Developed REST APIs with Flask and SQLAlchemy for managing research datasets and experiment tracking.
- Collaborated with PhD researchers to translate machine learning models into production-ready web services.
- Participated in the development of a natural language processing pipeline for Swahili language text analysis.

EDUCATION

Master of Science in Computer Science

2021 – 2023

University of Nairobi — Nairobi, Kenya

- Specialization: Distributed Systems & Cloud Computing
- Thesis: "Optimizing Microservices Communication Patterns in Event-Driven Architectures for East African Fintech Platforms"
- GPA: 3.85/4.0 (First Class Honours)
- Relevant Coursework: Advanced Algorithms, Distributed Computing, Machine Learning, Cloud Architecture, Software Engineering Principles, Database Systems, Computer Networks
- Teaching Assistant for undergraduate courses: Data Structures & Algorithms, Web Development

Bachelor of Science in Computer Science

2013 – 2017

Jomo Kenyatta University of Agriculture and Technology (JKUAT) — Juja, Kenya

- GPA: 3.72/4.0 (First Class Honours)
- Relevant Coursework: Object-Oriented Programming, Operating Systems, Computer Architecture, Discrete Mathematics, Linear Algebra, Probability & Statistics, Software Project Management
- Final Year Project: "A Mobile-First Learning Management System for Rural Kenyan Schools" (React Native + Node.js)
- President, Computer Science Students Association (2016–2017)
- Dean's List all semesters

PROFESSIONAL CERTIFICATIONS

- AWS Solutions Architect – Professional (2023)
- Google Cloud Professional Cloud Architect (2022)
- Kubernetes Certified Application Developer (CKAD) (2022)
- HashiCorp Terraform Associate (2021)

- MongoDB Certified Developer Associate (2020)

NOTABLE PROJECTS

OpenFinance API Gateway (Open Source) — TypeScript, Node.js, Redis, Docker | 1,200+ GitHub Stars

- Built an open-source API gateway specifically designed for African fintech integrations (M-Pesa, Flutterwave, Paystack).
- Handles rate limiting, request validation, circuit breaking, and automatic retry with exponential backoff.
- Used by 50+ startups across East and West Africa.

AI-Powered Code Review Bot — Python, LangChain, OpenAI, GitHub Actions

- Created a GitHub Action that provides intelligent code review suggestions using GPT-4 and custom fine-tuned models.
- Analyzes code quality, security vulnerabilities, performance issues, and suggests improvements.
- Integrated with Slack for team notifications and review summaries.

Real-Time Collaborative Whiteboard — Next.js, WebRTC, Canvas API, Supabase Realtime, Y.js

- Built a collaborative drawing and brainstorming tool supporting 50+ concurrent users with conflict-free real-time sync.
- Implemented CRDT-based state management for offline-first capabilities.
- Features include shape recognition, sticky notes, embedded media, and export to PDF/PNG.

PUBLICATIONS & TALKS

- "Scaling Event-Driven Architectures in African Fintech" — AfricaTech Conference 2023
- "Building Resilient Microservices with Go and Kubernetes" — GopherCon Africa 2022
- "The State of Developer Tools in Africa" — DevFest Nairobi 2022 (Keynote)
- Co-author: "Machine Learning for Agricultural Advisory Systems in Sub-Saharan Africa" — IEEE Access Journal, 2019

LANGUAGES

Spoken: English (Fluent), Swahili (Native), French (Intermediate)

INTERESTS

Open-source development, technical blogging, mentoring early-career developers, hackathon organizing, trail running, chess
